

Osteoarthritis Research Study

Intermountain Research Center is seeking participants for a clinical research study to test and investigational medication to treat the most common form of arthritis—osteoarthritis.

If you qualify for this research study, you will receive FREE study-related care and medication for one year. In order to participate, you must meet the following criteria:

- Have had osteoarthritis of the hip, knee, hand, spine, neck or lower back with symptoms for at least 12 months
- Require long-term medication for osteoarthritis.
- Are 45 years of age or older
- Daily low-dose aspirin may be taken
